June 2026

To the Hiring Team,

I am a **Software Engineer with 4+ years of experience** building and shipping production systems — from ecommerce platforms and SaaS products to **large-scale, multi-tenant enterprise software** processing **millions of records daily**. I write clean, maintainable code and take genuine ownership of what I build, from architecture through deployment.

At **Sokrio**, I have been a core contributor across the full stack. I **architected the migration from a Laravel + Vue.js monolith to a microservices architecture** — introducing **RabbitMQ** for async messaging, **MongoDB** for the reporting layer, and **Redis** for caching. I also **led the complete frontend rewrite from Vue.js to React.js + Next.js in under 2 months**, and designed **Python-powered analytics APIs** powering performance benchmarking for 100+ enterprise clients. Across six production applications, I have owned full-stack delivery: **API design, background job pipelines, MySQL and MongoDB query optimisation, multi-tenant RBAC, CI/CD, and AWS monitoring**.

Before Sokrio, I built full-featured **multi-store ecommerce platforms** at SoftArch and a complete **CodeCanyon SaaS product** at Am Coders — where I was promoted from intern to full-time within a month. I thrive in environments where I can take ownership, move fast, and raise the bar on code quality.

I am looking for a team where I can do my best work — building systems that matter, with people who care about craft. If that sounds like a fit, **I would love to talk**.

*Warm regards,*

**Komol Chandra Devnath**
