June 2026

To the Hiring Team,

I am a **Software Engineer with 5+ years of experience** building and owning production systems — from ecommerce platforms and CodeCanyon SaaS products to **large-scale, multi-tenant enterprise software** processing **millions of records daily**. I write clean, maintainable code, take genuine ownership of what I build, and thrive in environments where engineering quality and business impact go hand in hand.

At **Sokrio**, I have been a core contributor across the full stack serving **100+ enterprise clients**. I **architected the migration from a Laravel + Vue.js monolith to a microservices architecture** — introducing **RabbitMQ** for async messaging, **MongoDB** for the reporting layer, and **Redis** for caching. I designed and integrated **payment gateway flows** covering the full lifecycle — initiation, webhook handling, failure retries, and reconciliation. I also **led the complete frontend rewrite from Vue.js to React.js + Next.js in under 2 months**, and built **Python-powered analytics APIs** powering performance benchmarking for enterprise clients. Beyond engineering, I served as the **technical bridge between the engineering and business teams** — gathering requirements, writing specs, and ensuring on-time delivery aligned to client SLAs.

Before Sokrio, I built full-featured **multi-store ecommerce platforms** at SoftArch — with POS integration, payment gateways, and CI/CD infrastructure — and a complete **CodeCanyon SaaS product** at Am Coders, where I was promoted from intern to full-time within a month. Across every role, I have owned work end-to-end: from system design and API architecture through to deployment, monitoring, and client support.

I am looking for a team where I can do my best work — building systems that matter, collaborating with people who care about craft, and continuing to grow as an engineer. If that sounds like a fit, **I would love to talk**.

Warm regards,

Komol Chandra Devnath
