

KOMOL CHANDRA DEVNATH

Full-Stack Software Engineer, Backend-Focused, Multi-Tenant SaaS

Dhaka, Bangladesh | +880 1874303467 | komolnath67@gmail.com

<https://github.com/komol-chandra> | <https://linkedin.com/in/komol-chandra>

SUMMARY

Senior Full-Stack Software Engineer with 5+ years of experience building multi-tenant SaaS used by 100+ enterprise clients across 40+ industries. Helped grow company revenue by 27%, made systems up to 85% faster, and cut the time to fix production issues by 65%.

Passionate about platform reliability, infrastructure automation, and observability, and currently expanding into Go, system design, and SRE practices. I enjoy turning complex, high-traffic systems into fast, stable, and easy-to-maintain platforms.

TECHNICAL SKILLS

Backend: PHP, Laravel, Node.js, Python(FastAPI), REST APIs

Frontend: React.js, Next.js, Redux Toolkit, TypeScript, JavaScript, Vue.js

Databases: MySQL, MongoDB, Redis

Architecture: Microservices, Event-Driven Architecture, Multi-Tenant SaaS, RabbitMQ, Background Job Pipelines

DevOps and Cloud: Docker, AWS, (CI/CD), Linux, Git

Testing and Observability: Test-Driven Development (TDD), PHPUnit, pytest, Postman, Laravel Telescope, AWS CloudWatch, structured logging.

EXPERIENCE

Software Engineer — Sokrio, Dhaka, Bangladesh

2023 – Present

Multi-tenant distribution and order management SaaS serving 100+ enterprise clients across 40+ industries.

- **Architecture:** Migrate Laravel/Vue.js monolith to event-driven Laravel microservices on RabbitMQ, MongoDB and Redis, with queue pipelines for heavy reports and SOAP sync.
- **Multi-tenancy and security:** Built landlord/tenant DB isolation, territory-scoped RBAC, and a payment gateway with HMAC verification, idempotency keys and auto-reconciliation.
- **Frontend:** Led the Vue.js to React, Next.js and TypeScript rewrite in 2 months, and set the component, folder-structure and code-review standards the team adopted.
- **Analytics (Python):** Built a FastAPI market-intelligence service with pre-aggregated rollups, Redis-cached MongoDB pipelines and concurrent cross-tenant fan-out.
- **Reporting:** Built heavy reports over millions of records using MongoDB aggregation pipelines, background queue jobs and Redis caching, cutting report load times by up to 85%.
- **Field force and van sales:** Built Task Manager (plan, approval, achievement tracking), Vehicle Feedback and Van Attendance, plus GPS-spoofing fraud detection, contributing to 27% company revenue growth.
- **Data design:** Designed a central Product Category Mapping on a polymorphic entity-mapping model, and bulk-import validation that pinpoints errors at row and cell level.
- **Reliability:** Cut time to resolve production issues by 65% through 24/7 support with Laravel Telescope, AWS CloudWatch and structured logging; ship services with Docker and CI/CD.

Junior Software Engineer — SoftArch, Dhaka, Bangladesh

May 2022 – May 2023

- Built GirlyShopper, a multi-store e-commerce platform with Point of Sale (POS) integration, barcode inventory, real-time stock tracking and card, bKash, Nagad and cash-on-delivery payments via webhooks.

- Built a grocery delivery platform with multi-store inventory, automated low-stock restocking and MySQL query tuning, and deployed apps to Linux VPS servers through Dockerized CI/CD pipelines.

Software Engineer — Am Coders, Dhaka, Bangladesh

Feb 2021 – Apr 2022

- Built and shipped a multi-tenant SaaS product sold on CodeCanyon, with RBAC, a REST API, a Vue.js frontend, a full subscription lifecycle and HMAC-verified payment webhooks.
- Handled buyer bug reports and support for the product; promoted from intern to Software Engineer within 1 month.

EDUCATION

Bachelor of Science in Computer Science and Engineering

2022 – 2025

- Bangladesh University of Business and Technology (BUBT), Dhaka
