

KOMOL CHANDRA DEVNATH

Senior Full-Stack Software Engineer | PHP, Laravel, Node.js, React, TypeScript | Microservices and Multi-Tenant SaaS

Dhaka, Bangladesh | +880 1874303467 | komolnath67@gmail.com

GitHub: github.com/komol-chandra | LinkedIn: linkedin.com/in/komol-chandra

PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with 5+ years of experience building multi-tenant SaaS used by 100+ enterprise clients across 40+ industries. Helped grow company revenue by 27%, made systems up to 85% faster, and cut the time to fix production issues by 65%.

Led a Laravel monolith to event-driven microservices migration (Node.js, RabbitMQ, MongoDB, Redis) and a Vue.js to React/TypeScript rewrite. Uses AI-assisted development daily, running Claude Code with custom skills and multi-agent workflows to ship tested features faster.

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, SQL

Backend: Laravel, Node.js, Express.js, FastAPI, REST APIs, SOAP, Laravel Queues, Background Jobs, Webhooks

Frontend: React.js, Next.js, Redux Toolkit, Vue.js, HTML5, CSS3, Ant Design, Bootstrap

Databases: MySQL, MongoDB (aggregation pipelines), Redis, query optimization, indexing, data modeling

Architecture: Microservices, Event-Driven Architecture, RabbitMQ, Multi-Tenant SaaS, RBAC, Payment Gateway Integration, System Design

DevOps and Cloud: Docker, Docker Compose, CI/CD, AWS, AWS CloudWatch, Linux, Nginx, VPS, Git, Kubernetes (familiar)

Testing and Observability: Test-Driven Development (TDD), PHPUnit, pytest, Postman, Laravel Telescope, structured logging, monitoring and alerting

AI-Assisted Development: Claude Code, multi-agent workflows, custom skills, context engineering, AI-assisted code review and testing

PROFESSIONAL EXPERIENCE

Software Engineer | Sokrio | Dhaka, Bangladesh 2023 – Present

Multi-tenant distribution, supply chain and order management SaaS serving 100+ enterprise clients across 40+ industries.

- **Microservices migration:** Studied microservice patterns with the team, then led the migration of a Laravel 8/Vue.js 2 monolith to an event-driven platform: Laravel 13 core API, separate React tenant and admin apps, and Laravel microservices (Report, Notification, SOP) over RabbitMQ, MongoDB and Redis. Ran both systems in parallel for a zero-downtime cutover, cutting server load by about 20%.
- **Multi-tenancy and security:** Built landlord/tenant database isolation, tenant-scoped query scoping and territory-scoped role-based access control (RBAC) from scratch, with zero cross-tenant data leakage across 100+ tenants.
- **Payments:** Designed the payment gateway integration for client billing and subscriptions: initiation, webhooks, retries, auto-reconciliation and receipts, secured with HMAC signature verification and idempotency keys, with zero failed transactions in production.
- **Frontend modernization:** Led the Vue.js to React, Next.js, Redux Toolkit and TypeScript rewrite in 2 months, re-worked key user journeys with product stakeholders, and set the component, folder-structure and code-review standards the team adopted. User engagement rose 30%.
- **Reporting and performance:** Built heavy reports over millions of records using MongoDB aggregation pipelines, Laravel queue jobs (retries, dead-letter queues, priority jobs) and Redis caching, cutting report load times by up to 85% with 99.9%+ report-generation uptime.
- **Database optimization:** Tuned MySQL with composite indexes, EXPLAIN analysis and N+1 elimination; moved heavy reads to MongoDB; designed a polymorphic entity-mapping model and row/cell-level bulk-import validation.

- **Analytics service (Python):** Built a FastAPI market-intelligence and benchmark service that compares clients with anonymized market peers, using pre-aggregated rollups, Redis-cached MongoDB pipelines and concurrent cross-tenant fan-out.
- **APIs and integrations:** Designed REST APIs for the mobile field-force app, plus SOAP endpoints and queue-based sync for legacy enterprise clients.
- **Field force and van sales:** Built Task Manager (plan, approval, achievement tracking), Van Sales, Vehicle Feedback and Van Attendance modules with real-time sync to the core platform, plus GPS-spoofing fraud detection, contributing to 27% company revenue growth.
- **DevOps:** Containerized services with Docker and built CI/CD pipelines for automated testing and deployment, making deployments about 40% faster with no environment-mismatch incidents.
- **Reliability and on-call:** Primary 24/7 on-call engineer for six production apps; cut issue resolution time by 65% with Laravel Telescope, AWS CloudWatch and structured logging.
- **AI-assisted engineering:** Set up a Claude Code workflow with custom skills and sub-agents for database, backend, frontend and test work, speeding up delivery of tested features.

Junior Software Engineer | SoftArch | Dhaka, Bangladesh May 2022 – May 2023

- Built GirlyShopper, a multi-store e-commerce platform (Laravel, Vue.js, MySQL) with Point of Sale (POS) integration, barcode inventory and real-time stock tracking, cutting manual stock reconciliation by about 60%.
- Integrated card, bKash, Nagad and cash-on-delivery payments with webhook-driven order status updates, plus wishlists, persistent cart and real-time stock checks.
- Built a grocery delivery platform with multi-store inventory, advance orders, automated low-stock restocking and MySQL query tuning for peak order volumes.
- Managed Linux VPS servers for multiple production apps and set up Dockerized CI/CD pipelines (lint, test, deploy on every push) for zero-downtime releases.

Software Engineer | Am Coders | Dhaka, Bangladesh Feb 2021 – Apr 2022

- Designed, built and shipped a multi-tenant SaaS product sold on the CodeCanyon marketplace, with RBAC, a REST API and a Vue.js frontend.
- Integrated payment gateways with a full subscription lifecycle (trial, renewal, cancellation), HMAC-verified payment webhooks and encrypted billing storage.
- Handled buyer bug reports and support, usually resolving issues within 24 hours; promoted from intern to Software Engineer within 1 month.

PROJECTS AND RESEARCH

- **Point of Sale (POS) System:** Node.js, Express.js and React.js POS that manages products, customers and orders through RESTful APIs (github.com/komol-chandra/point-of-sell).
- **Bangladesh Geo-Data Collection:** Python geocoding dataset of Bangladesh administrative divisions with latitude and longitude.
- **Research (submitted, under review):** Emotion Detection from Customer Reviews using LLMs, Sentiment Analysis and NLP; Bangladesh Suicide Case Pattern Analysis using Statistical Analysis and Data Mining.

EDUCATION AND CERTIFICATIONS

Bachelor of Science in Computer Science and Engineering 2022 – 2025

Bangladesh University of Business and Technology (BUBT), Dhaka

Diploma in Engineering, Data Telecommunication and Networking 2016 – 2020

Feni Computer Institute, Feni

Courses and Certifications: AWS Fundamentals (2025) | Problem Solving and Data Structures (2023) | Frontend Development with React.js and Next.js (2022) | Software Engineering Fundamentals (2020)
