PROFILE

Results-driven Software Engineer with **5+ years of experience** building and scaling production systems — from multi-store ecommerce platforms to **large-scale, multi-tenant enterprise software** serving **100+ enterprise clients** and processing **millions of records daily**. Expert in microservices, Laravel, React.js, Node.js, and Python. Track record of leading full-stack delivery, integrating payment systems, collaborating with business stakeholders, owning 24/7 production systems, and mentoring engineers to raise standards across the organisation.

SKILLS

Backend	Laravel (Expert) · Node.js · Python · PHP
Frontend	React.js · Next.js · Vue.js · TypeScript
Database	MySQL · MongoDB · Redis · RabbitMQ
DevOps	Docker · AWS · CI/CD · Linux · VPS
Architecture	Microservices · Multi-tenant SaaS · Event-driven
Payments	30+ Payment Gateway · Subscription · Webhook
Tools	Git · Postman · Unit Test · Queues · Debugger

RESEARCH

► Research Papers (Submitted / Under Review)

- **Emotion Detection from Customer Reviews** — LLMs, Sentiment Analysis, NLP
- **Bangladesh Suicide & Case Pattern Analysis** — Statistical Analysis, Data Mining

► Data Projects

- **Bangladesh Geo-Data Collection** — Geocoding, Admin Divisions, Lat/Long Dataset

WORK EXPERIENCE

Sokrio

Software Engineer · Dhaka, Bangladesh

2023 – Present

Multi-tenant Distribution & Supply Chain SaaS · 100+ enterprise clients incl. BEOL · millions of records/day

► Microservices Architecture Migration

- Migrated the Laravel + Vue.js monolith to event-driven microservices (Report, Notification, SOP)
- Introduced RabbitMQ for messaging, MongoDB for reporting, Redis for real-time caching
- Ran monolith and microservices in parallel — zero-downtime migration across all environments
- **Impact:** ~20% server load reduction; zero downtime during peak load

► Payment Gateway Integration

- Designed and integrated secure payment gateway flows for enterprise client billing and subscription management
- Full lifecycle: initiation, webhook handling, failure retries, reconciliation, receipts, and automatic order status updates
- Security: HMAC signature verification, idempotency keys, encrypted transaction logging to prevent duplicate charges
- **Impact:** Zero failed transactions in production; reliable, zero-manual-intervention billing across 100+ enterprise tenants

► Frontend Modernisation — Vue.js v2 → React 18 + Next.js

- Led the full frontend rewrite in under 2 months — modular components, TypeScript throughout
- Worked with business & product stakeholders to re-evaluate UX flows and key user journeys
- Set component, folder-structure, and code-review standards adopted team-wide
- **Impact:** 30% higher user engagement; faster onboarding; easier maintenance

► Python Analytics APIs, Mobile & SOAP Integrations

- Built a standalone FastAPI service for advanced reporting & benchmark analytics
- Designed REST APIs for the mobile field app plus SOAP endpoints for legacy client integrations
- Laravel Queue pipelines (Redis) for high-volume reports — retries, dead-letter queues, priority jobs
- **Impact:** 99.9%+ report-generation uptime; sub-second analytics response

► Sokrio-Benchmark — Market Intelligence Python Service

- Built a FastAPI benchmarking product comparing clients against anonymised market peers
- 5–6 core benchmark features with Redis-cached MongoDB aggregation pipelines
- Shared key-pattern conventions with the core platform for consistent tenant scoping
- **Impact:** Live, self-serve benchmark view for management — no manual reporting

► Van Sales & Task Manager

- Built the van-sales rep app: route order capture, stock tracking, task assignment
- Real-time task-status sync to the core platform for supervisor visibility
- Integrated with core inventory/order APIs for automatic reconciliation
- **Impact:** Replaced paper-based tracking with one mobile workflow for sales & tasks

► 24/7 Production Support & Business Team Collaboration

- Primary on-call engineer across all six Sokrio applications — same-day SLA fixes
- Used Telescope, CloudWatch, and structured logging to diagnose production issues
- Technical bridge to business teams: requirements, spec writing, estimation & delivery
- **Impact:** Zero recurring critical incidents across 100+ enterprise accounts

► Multi-Tenant SaaS, RBAC & Database Optimisation

- Built tenant-scoped data isolation and RBAC from scratch — policies, middleware, query scoping
- Composite indexing, EXPLAIN-based tuning, N+1 elimination; heavy reads offloaded to MongoDB
- Decomposed Report, Notification & SOP services — independently scalable, no DB contention
- **Impact:** Zero cross-tenant leakage; millions of records/day, no manual DB work

► DevOps — Docker, AWS & CI/CD

- Containerised all Sokrio services with Docker for consistent dev/prod environments
- Designed CI/CD pipelines for automated testing & deployment across all environments
- AWS CloudWatch monitoring & alerting for app health, error rates, infrastructure
- **Impact:** ~40% faster deployments; zero environment-mismatch incidents

Stack: Laravel · Node.js · Python · React.js · Next.js · TypeScript · Vue.js · MySQL · MongoDB · Redis · RabbitMQ · Docker · AWS · CI/CD

SoftArch

Junior Software Engineer · Dhaka, Bangladesh

Stack: Laravel · Vue.js · MySQL · Docker · VPS · CI/CD

May 2022 – May 2023

Owned backend and deployment for two production e-commerce platforms end to end — from data model to payment integration to VPS rollout. First role handling live customer traffic and real payment reconciliation independently.

► GirlyShopper — Multi-Store E-Commerce Platform

- Built a multi-store platform: POS integration, barcode inventory, real-time stock tracking
- Integrated payment gateway (card, bKash/Nagad, COD) with webhook-driven status updates
- Added wishlists, persistent cart, size charts, and real-time stock checks
- **Impact:** ~60% less manual stock reconciliation; zero payment issues

► Grocery Delivery Platform

- Built a daily-goods platform: real-time inventory, automated low-stock restocking, advance orders
- Multi-store availability management with MySQL query tuning under peak order volumes
- **Impact:** Fewer out-of-stock incidents; less manual stock management

► VPS Infrastructure & CI/CD Pipelines

- Managed Linux VPS servers for multiple production apps with zero-downtime deploys
- Set up CI/CD pipelines: lint, test, deploy on every push to main; Docker-containerised
- **Impact:** Reproducible releases; eliminated manual deployment errors

Am Coders

Junior Software Engineer · Dhaka, Bangladesh

Stack: Laravel · Vue.js · MySQL · Payment Gateways

Feb 2021 – Apr 2022

Joined as an intern and independently designed, built, and shipped a market-ready multi-tenant SaaS product to CodeCanyon — promoted to full-time within a month on the strength of that delivery.

► CodeCanyon SaaS Product — Built & Shipped Independently

- Built a market-ready SaaS product: multi-tenant architecture, RBAC, REST API, Vue.js frontend
- Integrated payment gateways with a full subscription lifecycle: trial to renewal & cancellation
- Webhook listeners for payment events; HMAC verification and encrypted billing storage
- **Impact:** Shipped to CodeCanyon marketplace with active commercial sales

► Client Support & Rapid Promotion

- Primary contact for CodeCanyon buyer bug reports — resolved typically within 24 hours
- Promoted from intern to full-time within 1 month on delivery quality alone
- **Impact:** High marketplace rating; fastest promotion on the team

TMSS ICT

Software Engineer (Intern → Junior Developer) · Feni / Dhaka, Bangladesh

Stack: Laravel · Vue.js · MySQL · Git · Docker

Feb 2020 – Nov 2021

First engineering role: a 3-month internship learning the core stack on practice builds, converting into 18 months maintaining and extending TMSS's live school management system.

► Foundations — Internship (Feb–Apr 2020)

- Learned Laravel, Vue.js, MySQL, Git and Docker through guided practice projects
- Built two practice apps end-to-end: a School Management system and an Ecommerce store
- **Impact:** Retained and converted into a paid development role on the strength of these builds

► TMSS School Management System — Ongoing Development

- Built and maintained the student attendance module used across TMSS-run schools
- Developed new reporting features and modules based on staff/admin requirements
- Owned bug triage and fixes on the live system — first production support experience
- **Impact:** Attendance & reporting modules stayed in daily use across branches

PROJECTS

Point of Sale (POS) System — github.com/komol-chandra/point-of-sell

Lightweight POS system built with Node.js, Express & React.js — manages products, customers and orders via RESTful APIs.

EDUCATION

Bachelor of Science — Computer Science & Engineering

Bangladesh University of Business & Technology, Dhaka · 2022 – 2025

Diploma in Engineering — Data Telecommunication & Networking

Feni Computer Institute, Feni · 2016 – 2020

COURSES & CONTINUOUS LEARNING

2020	Software Engineering Fundamentals
2022	Frontend Dev — React.js & Next.js
2023	Problem Solving & Data Structures
2025	AWS Fundamentals
