Address: 274 Ibrahimpur, Mirpur 14, Dhaka, Bangladesh

SUMMARY:

Curious coder exploring the digital frontier, creating intriguing tech wonders, and always on the quest to make things more fascinating

TECHNICAL SKILLS:

- **Frontend** - Flutter, Dart, JavaScript, React js, TypeScript
- **Backend** - Node.js, Express.js, TypeScript, Dotnet, Python, C, rust
- **DevOps** - Docker, AWS
- **Database** - MySQL, MongoDB, PostgreSQL, Firebase, NeonDB,

EXPERIENCE:

Senior Mobile Application Developer - Mind Orbital Technologies | Contractual | September 2024 - December 2024

- Implemented complex API integrations using Dio in Flutter, managing data efficiently with JSON serialization, error handling, and state management using Bloc for scalable and maintainable architecture.
- Integrated Hive for local data caching in Flutter, implementing optimized box operations, lazy loading, and efficient key-value storage to enhance offline data accessibility and app performance
- Designed and implemented an offline-first data synchronization mechanism in Flutter, using Hive for local storage and handling automatic background uploads to the cloud when the user regained connectivity
- Developed complex, responsive UIs in Flutter, utilizing custom widgets, animations, and advanced layout techniques to deliver smooth, dynamic user experiences across multiple screen sizes and orientations

Full-Stack Mobile Application Developer - Yildiz Consulting LLC | Contractual | April 2024 - September 2024

- Integrated the Matter SDK with a Flutter-based smart home app, enabling efficient control and management of diverse smart devices. This integration optimized communication protocols. Additionally, implemented Matter over Thread to enhance real-time device interaction and energy efficiency, significantly improving user experience and engagement.
- Implemented Firebase Firestore for efficient data management in the Flutter-based smart home app integrated with the Matter SDK. This solution optimized read and write operations, reducing database calls by 40%. Additionally, used Firebase Cloud Messaging to boost real-time communication and user engagement, enhancing the overall functionality and user experience of the smart home system
- Implemented remote control functionality for TP-Link Kasa devices using the vendor API within the Flutter-based smart home app. Utilized both Python and JavaScript libraries to streamline device management and enhance interoperability, significantly improving response times and providing users with a seamless smart home experience.
- Implemented Firebase Cloud Functions to add scheduling capabilities for users' smart devices within the Flutter-based smart home app. This integration allowed users to automate device operations based on time and events, enhancing convenience and efficiency in managing their smart home environment

Senior Mobile Application Developer - Plantake | June 2023 - April 2024

- Integrated Firebase Firestore for efficient data management across diverse application sections, optimizing read and write operations and achieving a 40% reduction in the number of calls. Additionally, implemented Firebase Cloud Messaging to enhance real-time communication and user engagement.
- Implemented in-app purchase functionality in the Flutter app, optimizing transactions for a 20% reduction in time, enhancing the overall user experience.
- Integrated seamlessly with a Node.js and Express server infrastructure, leveraging AWS S3 bucket for efficient data storage and retrieval. This backend implementation ensures secure and reliable handling of data, optimizing processes for enhanced efficiency. The use of AWS S3 provides a scalable and reliable solution for storing and retrieving data, contributing to a robust backend architecture
- Championed the successful implementation of pivotal features, such as Journal Feature, Venting Feature, and Real-Time Chat, as well as innovatively introduced Sleep Player functionality. Demonstrated technical prowess and leadership, shaping a more enriched user experience

Mobile Application Developer - Techshoi | June 2021 - March 2022

- Implemented Flutter Audio Player, significantly enhancing audio playback efficiency for an improved user experience
- Implemented responsible UI/UX design principles in Flutter, emphasising clean code practices for aesthetic appeal and functional efficiency. This approach prioritised the creation of an intuitive and accessible user interface, contributing significantly to an overall enhanced and user-friendly experience.
- Implemented Domain Driven Design (DDD) architecture with production-level code, meeting industry standards for scalable and maintainable solutions

Mobile Application Developer - NeedIn | April 2022 - August 2022

- Implemented clean code practices for Flutter state management using BLoC (Business Logic Component), ensuring a robust and maintainable architecture for streamlined application development.
- Implemented Mapbox API integration to seamlessly incorporate interactive maps into the application, enriching its geospatial features and providing users with an enhanced mapping experience.
- Implemented the design pixel perfectly in the app, adhering to responsive and user-friendly principles. Meticulously executed every detail to ensure a visually polished and cohesive user interface, enhancing the overall user experience

Mobile Application Developer - Babycare | Feb 2021 - June 2021

- Implemented a robust CI/CD pipeline for Flutter, automating build and deployment processes. This initiative resulted in a 25% increase in development efficiency, providing a streamlined and automated workflow for continuous integration and delivery of high-quality applications.
- Implemented state management in Flutter using BLoC pattern within a Domain-Driven Architecture, fostering clean and reusable code practices. This approach ensures a modular and maintainable codebase, enhancing the efficiency of state handling in the application.
- Implemented Opencart API integration in Flutter, ensuring robust error handling for seamless communication and data exchange within the application. This integration enhances functionality, allowing for efficient interaction with Opencart services and providing a smooth, error-resilient, and integrated user experience.
- Implemented a pixel-perfect design in the app with a focus on responsive, user-friendly, and clean aesthetics. Meticulously executed each detail to ensure a visually refined and seamless user interface, contributing to an enhanced user experience

TECHNICAL PROJECTS:

Guitar Tuner - Flutter, pitchupdart,

Developed a cross-platform guitar tuning app using Flutter that detects audio frequencies in real-time and matches them with target notes for accurate tuning. Implemented audio signal processing and an intuitive user interface to enhance user experience

Habit Tracker - Flutter, Hive, Heat-Map

Crafted a robust Flutter application tailored for habit and goal tracking, providing users with a versatile tool for personal growth. The app boasts an intuitive interface enabling seamless logging of daily progress, setting reminders, and monitoring performance over time. Engineered with a focus on user-centric design, it serves as a comprehensive solution to foster motivation and establish healthy routines.

Restaurant Management - Flutter, Hive, Firebase

A robust Restaurant Management System application using Flutter, Firebase, and Hive. This integrated solution provides restaurant owners with efficient management capabilities for their establishments and staff. It leverages Firebase for real-time data synchronisation and authentication, while Hive ensures fast local storage for offline functionality. This combination enhances operational efficiency and user experience.

E-commerce App - Flutter, Hive, RESTful API

This project encompasses an e-commerce clothing application meticulously built following Domain Driven Design principles. It features the implementation of Rest API for seamless data communication, coupled with Hive for local data caching. This approach not only enhances the application's overall performance but also ensures a smooth and efficient user experience.

Recipe App - Flutter, Hive, RESTful API

Explore the culinary world with Recipe App, a cooking companion for food enthusiasts and home chefs. Seamlessly curated recipes through Rest API, delightful UI/UX, and optimised performance with Hive's local data caching enhance the cooking experience.

EDUCATION:

American International University Bangladesh - Bachelor's degree in Computer Science and Engineering
